

# METHOD AND APPARATUS EXTENDING A SERVER TO A WIRELESS-ROUTER SERVER

## Abstract

A method and apparatus of providing communication between a wireless  
5 transceiver and at least one wireline network, wherein a wireless interface  
possessing a wireline communications port and the wireless transceiver is  
coupled to a server, wherein the server is further coupled to the wireline  
network. Certain embodiments preferably include methods to produce a  
wireless router from a server.
